

Working on myself.

I have taken sometime out of coding every night to work on my self and getting my self organized. I have purchased a Project book to focus on the three of my main Project, although there is only one on there right now that I will be dedicating my time into. Which is the Python Project Manager. I plan on getting a data base set up to store passwords that are saved and have user switching. I am aiming to get a lot done regarding to my development on software over the next year and I am starting off with python due to the fact that I have used it in the past and needed just to refresh my memory on the language.

Now there is a few things that I have been working on getting a lot done a on my personal website also. I am looking for a new job in software development and, or website design. I am by the end of 2019 to have a couple of months experience in the field and have built a portfolio to back up my work.

I aim to make the terminal theme into a good and well designed theme. I plan on backing it with bootstrap and creating a better layout for the website. I would like for the terminal website to become a text base website that both looks nice and works well. So below is the base layout that I will be using for

```
<div class="container">
  <div class="row">
    <div class="col-xs-1"></div>
    <div class="col-xs-3 col-lg-2"></div>
    <div class="col-xs-7 col-lg-8"></div>
    <div class="col-xs-1"></div>
      <div class="col-xs-4 col-lg-3"></div>
      <div class="col-xs-8 col-lg-9"></div>
        <div class="col-xs-9 col-lg-10"></div>
        <div class="col-xs-3 col-lg-2"></div>
        <div class="col-xs-12"></div>
  </div>

</div>
```
